Retail sales are calculated from the Illinois Department of Revenue's Standard Industrial Classification (SIC) Code Reporting, available at <https://www.revenue.state.il.us/app/kob/index.jsp>. The following is a brief description of the measures used.

Between 2002 and 2016, total retail sales in Galesburg increased 21.5 percent. During the same time period, the Illinois' total retail sales increased by 32.9 percent and downstate Illinois increased by 28.7 percent. Downstate sales figures include all incorporated and unincorporated areas except those in Cook, DuPage, Kane, Lake, McHenry, and Will counties. These counties are affected by Chicago economy.\*

Changes in sales are partially determined by the number of businesses in operation. In Galesburg, businesses decreased 25.5 percent compared to the 5.0 percent decline for the state of Illinois, between 2002 and 2016. Per capita sales (sales divided by local population according to Census Bureau's estimates) in Galesburg were \$17,720 compared with \$14,106 for Illinois in 2016.

The drawing power of a city or county is reflected by a Pull Factor calculated as the ratio of local per capita retail sales divided by downstate (or collar) per capita retail sales. A Pull Factor greater than one reflects the strength of the local retail sector; the area is selling more per capita than comparable areas. A pull factor less than one indicates the residents are shopping elsewhere.

As noted earlier, Galesburg had per capita retail sales of \$17,720 in 2016. Downstate's per capita retail sales was \$12,814 in 2016. This resulted in a positive pull factor of 1.29, indicating that Galesburg has exceeded what would be expected compared with other areas and could mean that customers are being attracted from surrounding areas. Table 2 shows Pull Factors by specific category. More detail on types of business by category is available at: [www.revenue.state.il.us/app/kob/terms.jsp](http://www.revenue.state.il.us/app/kob/terms.jsp).

Table 3 illustrates the effects of inflation on retail sales. Based on the Consumer Price Index, published by the Bureau of Labor Statistics, U.S. Department of Labor, it cost \$74.96 in 2002 to purchase the same goods and services that cost \$100 in 2016. When the effects of inflation are taken into consideration, total retail sales for Galesburg declined by 8.9 percent over the time period examined. The comparable downstate Illinois change was a 2.7 percent decline in inflation-adjusted dollars. The different categories of sales vary according to the real change.

Caution should be used when comparing category items over the years, since businesses may not report themselves in the same category from year to year, which results in some fluctuation of sales by category. Table 3 does not take into consideration population changes or technology changes that effect industrial efficiencies. Blank categories have less than four taxpayers, therefore no data is shown to protect the confidentiality of individual taxpayers. Total retail sales amount includes the information censored from the category breakdown.

Potential sales are a product of downstate per capita sales, local population, and the index of income being multiplied together. The index of income is a ratio of local to downstate per capita income. The index of income attempts to measure the relative wealth of the local area compared to the downstate region. The index of income for Galesburg is 0.76, which indicates that the local per capita income\* is below the downstate average by 24.3 percent. In 2016, potential sales were \$300,169,375 and actual sales were \$548,607,421, resulting in a surplus of \$248,438,046. A surplus indicates that the local area attracted customers from the surrounding area.

\*Starting in 2009 calculations, local personal income data from the American Community Survey from the U.S. Census Bureau was used. Between 2000 and 2008.

## Retail Trade Summary: Galesburg, Illinois

### County Retail Trade Summary: Knox County

County retail trade information can provide additional insight on how the area is doing. According to the Illinois Department of Revenue's Standard Industrial Classification data set, there are over 100 municipalities that are situated on the boundaries of two or more counties. All municipalities are assigned a county based on where the greatest percentage of its businesses are located. When there is a tie in the number of businesses, then the county assignment falls to the county with the highest retail sales.

Figure 2. 2016 County Retail Trade Pull Factors Map

There are 31 counties that showed a gain in customers/sales in Illinois with a pull factor of 1 or more.

At the opposite side of the spectrum, 17 counties showed significant loss of customers/sales, with a pull factor less than 0.5. These counties are usually adjacent to dominant trade centers. The smallest pull factor was 0.22 in Gallatin County, followed by 0.24 in Alexander County.

There were 54 counties that had pull factors between 0.5 and 1. There were three counties with pull factors between 0.95 and 1 (Knox, Livingston, and Clinton Counties).
