Retail sales are calculated from the Illinois Department of Revenue's Standard Industrial Classification (SIC) Code Reporting, available at <https://www.revenue.state.il.us/app/kob/index.jsp>. The following is a brief description of the measures used.

Between 2002 and 2016, total retail sales in Tiskilwa decreased 16.3 percent. During the same time period, the Illinois' total retail sales increased by 32.9 percent and downstate Illinois increased by 28.7 percent. Downstate sales figures include all incorporated and unincorporated areas except those in Cook, DuPage, Kane, Lake, McHenry, and Will counties. These counties are affected by Chicago economy.*

Changes in sales are partially determined by the number of businesses in operation. In Tiskilwa, businesses increased 15.0 percent compared to the 5.0 percent decline for the state of Illinois, between 2002 and 2016. Per capita sales (sales divided by local population according to Census Bureau's estimates) in Tiskilwa were \$2,004 compared with \$14,106 for Illinois in 2016.

The drawing power of a city or county is reflected by a Pull Factor calculated as the ratio of local per capita retail sales divided by downstate (or collar) per capita retail sales. A Pull Factor greater than one reflects the strength of the local retail sector; the area is selling more per capita than comparable areas. A pull factor less than one indicates the residents are shopping elsewhere.

As noted earlier, Tiskilwa had per capita retail sales of \$2,004 in 2016. Downstate's per capita retail sales was \$12,814 in 2016. This resulted in a weak pull factor of 0.10, indicating that Tiskilwa has lost sales to competing communities when compared with other areas. Table 2 shows Pull Factors by specific category. More detail on types of business by category is available at: www.revenue.state.il.us/app/kob/terms.jsp.

*When a community is located in multiple counties, if one of the counties is considered a Chicago collar region county, then the community is assigned the collar region coding.

**Blank categories have less than four taxpayers; therefore no data is shown to protect the confidentiality of individual taxpayers. The total listed in Table 1 includes censored data. Businesses may not report themselves in the same category from year to year, resulting in some fluctuation of sales by category.

Table 3 illustrates the effects of inflation on retail sales. Based on the Consumer Price Index, published by the Bureau of Labor Statistics, U.S. Department of Labor, it cost \$74.96 in 2002 to purchase the same goods and services that cost \$100 in 2016. When the effects of inflation are taken into consideration, total retail sales for Tiskilwa declined by 37.3 percent over the time period examined. The comparable downstate Illinois change was a 2.7 percent decline in inflation-adjusted dollars. The different categories of sales vary according to the real change.

Caution should be used when comparing category items over the years, since businesses may not report themselves in the same category from year to year, which results in some fluctuation of sales by category. Table 3 does not take into consideration population changes or technology changes that effect industrial efficiencies. Blank categories have less than four taxpayers, therefore no data is shown to protect the confidentiality of individual taxpayers. Total retail sales amount includes the information censored from the category breakdown.

Potential sales are an estimate of the sales level that a local area should achieve, based on average downstate (or collar region) sales. Comparing potential sales to actual sales allows a measurement of retail **surplus** (positive number) or **leakage** (negative number).

Potential sales are a product of downstate per capita sales, local population, and the index of income being multiplied together. The index of income is a ratio of local to downstate per capita income. The index of income attempts to measure the relative wealth of the local area compared to the downstate region. The index of income for Tiskilwa is 0.72, which indicates that the local per capita income* is below the downstate average by 28.1 percent. In 2016, potential sales were \$7,233,633 and actual sales were \$1,573,197, resulting in a leakage of \$5,660,436. A leakage indicates that the local area has lost customers to the surrounding area.

*Starting in 2009 calculations, local personal income data from the American Community Survey from the U.S. Census Bureau was used. Between 2000 and 2008.

Retail Trade Summary: Tiskilwa, Illinois

County Retail Trade Summary: Bureau County

County retail trade information can provide additional insight on how the area is doing. According to the Illinois Department of Revenue's Standard Industrial Classification data set, there are over 100 municipalities that are situated on the boundaries of two or more counties. All municipalities are assigned a county based on where the greatest percentage of its businesses are located. When there is a tie in the number of businesses, then the county assignment falls to the county with the highest retail sales.
